Question-1:

Write code and connections in wowki for the ultrasonic sensor.

Whenever the distance is less than 100cms sent "alert" to IBM cloud and display in device recent events.

Code:

The screenshot displays the IBM Watson IoT Platform interface. The top navigation bar includes tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A sidebar on the left contains icons for various IoT-related functions. The main content area shows a device with ID '12345' in a 'Disconnected' state. Below this, a 'Recent Events' tab is active, displaying a table of events. The table has columns for 'Event', 'Value', 'Format', and 'Last Received'. Five events are listed, all with the format 'json' and received 'a few seconds ago'. A status message at the bottom right indicates '1 Simulation running'. The browser's address bar shows the URL 'sf54ab.internetofthings.ibmcloud.com/dashboard/devices/browse'. The Windows taskbar at the bottom shows the system clock as 15:51 on 28-10-2022.

Event	Value	Format	Last Received
event_test	{"Alert distance":26}	json	a few seconds ago
event_test	{"Alert distance":80}	json	a few seconds ago
event_test	{"Alert distance":20}	json	a few seconds ago
event_test	{"Alert distance":52}	json	a few seconds ago
