TITLE: Gas leakage alerting system and monitoring system.

Customer experience journey map

Use this framework to better understand customer needs, motivations, and obstacles by illustrating a key scenario or process from start to finish. When possible, use this map to document and summarize interviews and observations with real people rather than relying on your hunches or assumptions.

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

SCENARIO Browsing, booking, attending, and rating a local city tour	Detecting harmful gases	Creation of Web Application	Alerting users through e-mail or SMS	Notifying admin about leakage along with location.
Steps What does the person (or group) typically experience?	Proper maintanence of cylinders in gas industries.	Setting up a connection so that once gas leakage is detected it is reflected on the website.	The users must be made aware that gasis being leaked in their household/ industries.	Using GSM module ,the notification message is sent to the user.
Interactions What interactions do they have at each step along the way? People: Who do they see or talk to? Places: Where are they? Things: What digital touchpoints or physical objects would they use?	How much gases can it detect? What kind of sensor can be used?	Can it display the amount leaked? Can it display the permissible level of gases?	How long does the system system take to alert the user? When does the system send alert message?	How does the admin persons are reach the location? How many persons are available?
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me" or "Help me avoid")	Help me In proper Maintanance detect the Grylinders in das industries. Help me to detect the amount of Gasleakage.	Display the permissible Low quality level above And good which leakage Quality products online. is harmful.	Alert the user when the leakage has as possible. Alert the user when the leakage has crossed the level.	Availability of persons if Notify admin more with exact leakages are detected.
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	It is easy to fix the problem after finding the cause.	Feels confortable to got to know about more secure products for their problem.	Alerting the user can help them to reach the spot early and prevent damage.	When the admin is notified with the location,he can send people to reach on time.
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	If there is a technical problem there is a possibility of explosion.	If the website shows only gas is leaked without amount of leakage, its of no use.	Due to network issues the alarm messages will be delivered lately.	Availability of persons all time to reach the place in case of emergency.
Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	We can have peaceful environment in industries.	Automatic show down off power supply to prevent the environment.	It will provide you a 24/7 monitoring.	Once notified, the admin must be able to send the person immediately to the place and notify even in offline.
